How Your Data Are Used

To all of those who participate in our survey, Thank You! The data you provide are combined with those of many other respondents to produce monthly estimates of the number of persons employed in each industry, their average earnings, and the weekly hours for which they are paid. Many economic decisions are based on our estimates of employment, hours, and earnings. Your timely participation assures the accuracy of these important data.

DATA USES:

☒ By business to:

- compare their current employment and payroll trends with the industry as a whole
- plan and respond to changes in the business cycle
- guide decisions on plant locations, sales, and purchases
- negotiate labor contracts based on industry hourly earning and weekly hours

☒ By policymakers, such as:

- Council of Economic Advisors, to assess the current state of the economy and recommend actions
- Federal Reserve Board, to guide decision affecting interest rates and money supply
- Joint Economic Committee of Congress, to determine the impact of legislative initiatives
- state and local government officials, to monitor their industry trends and compare them with the rest of the country

☒ Also a major component of other economic indicators, such as:

- Gross National Product (GNP)
- Productivity Indexes
- Composite Index of Leading Economic Indicators

Remember, your individual firm responses are kept strictly confidential and are used only for statistical purposes.

If you are interested in participating or need more information about Current Employment Statistics publications and news releases, contact the Department of Workforce Development/Research and Analysis – Current Employment Statistics (CES) at 317-232-7715.

Indiana Statewide Narrative Analysis

November 2006

TOTAL NON-FARM

2,988,300

+400 (+0.0%) OTM; +12,800 (+0.4%) OTY

Seasonally adjusted employment was little changed as a gain of 2,700 jobs in **Trade, Transportation & Utilities** was largely offset by a loss of 1,800 jobs in **Manufacturing**. Layoffs in **Leisure & Hospitality** tracked recent trend, while the **Government** supersector shed slightly more jobs than normal for November. Conversely, layoffs in the **Construction** industry were lighter than usual for the month.

Employment is higher by 12,800 jobs (+0.4%) when compared to one year ago. Among the supersectors only **Manufacturing** posted a significant decline. National employment grew by 132,000 jobs over the month with most **Service-Providing** sectors of the economy showing strength. Over the year, 1.8 million jobs (+1.3%) have been added nationwide.

NATURAL RESOURCES & MINING

6,900

+0 (+0.0%) OTM; +0 (+0.0%) OTY

Natural Resource & Mining employment was unchanged over the month as well as over the year. National employment in the sector grew by 4,000 jobs over the month on the strength of hiring in support activities for mining.

CONSTRUCTION

152,700

+200 (+0.1%) OTM; +2,100 (+1.4%) OTY

Seasonally adjusted **Construction** employment grew for the third consecutive month, adding 200 jobs over the month and 1,500 since August. Warm late fall weather most likely contributed to fewer layoffs than normal. This is especially apparent in **Specialty Trade Contractors** where employment fell by just 1,600 jobs (before adjustment) over the 3-month period in comparison to a 10-year average decline of 3,300. Employment is higher by 2,100 jobs (+1.4%) when compared to one year ago with all three components adding jobs. National employment decreased by 29,000 over the month but is higher by 49,000 (+0.7%) when compared to November 2005.

MANUFACTURING

568,000

-1,800 (-0.3%) OTM; -3,600 (-0.6%) OTY

Considerable losses in **Fabricated Metals** as well as the **Motor Vehicle Body & Trailer** industry were central to a decline of 1,800 in factory employment. Of the major components, only **Machinery Manufacturing** posted a significant gain. The remaining sectors declined slightly or were little changed.

Over the year factory employment is lower by 3,600 jobs with modest gains in **Machinery** and **Non-Durable Goods** being offset by losses in **Primary Metals**, **Electrical Equipment** and **Motor Vehicle Parts**. National factory employment fell by 15,000 (-0.1%) jobs over the month and is lower by 50,000 (-0.4%) when compared to last year. **Motor Vehicle Parts** declined substantially at the national level as did **Wood Products**, **Furniture**, and **Textile Mills**.

TRADE, TRANSPORTATION & UTILITIES
+2,700 (+0.5%) OTM; +4,700 (+0.8%) OTY

592,300

Seasonal hiring led to employment gains within **Trade, Transportation & Utilities**. **Wholesale** and **Retail Trade** led the way with the largest buildup when seasonally adjusted, while other components held steady or suffered minimal losses for November.

Without seasonal adjustments, **Wholesale Trade** added 2,100 (+1.7%) jobs in the past year with 1,900 (+2.5%) of those coming from **Merchant Wholesalers**. **Retail Trade** seasonal buildup reflected an increase of 3,000 (+0.9%) wage earners. Small offsetting changes among the remaining industries have left employment little changed over the year.

INFORMATION
+0 (+0.0%) OTM; +500 (+1.2%) OTY

41,100

Over the month when seasonally adjusted, **Information** has remained stable but still shows a slight upward trend for the year. **Newspaper, Periodical, Book & Directory Publishers** and **Telecommunications** both experienced a small non-seasonally adjusted increase for the month, but only **Newspaper, Periodical, Book & Directory Publishers** is ahead of last year's employment.

Nationally, **Information** continues slowly decreasing it's jobs and shows no growth.

FINANCIAL ACTIVITIES
-200 (-0.1%) OTM; +2,200 (+1.6%) OTY

141,800

Employment in **Financial Activities**, seasonally adjusted, dropped slightly in November after holding steady for the past couple of months.

Year-ago employment in **Real Estate, Rental & Leasing** added 1,000 jobs. **Finance & Insurance** displayed an increase of 1,200, with **Credit Intermediation** employment accounting for 400.

PROFESSIONAL & BUSINESS SERVICES
+800 (+0.3%) OTM; +2,400 (+0.9%) OTY

279,000

A gain of 800 employees for November, after seasonal adjustment, represents sustained growth in every month of 2006. November's total employment of 279,000 is 5,500 jobs more when compared to January of 2006.

Since November 2005 the **Professional & Business** industry has experienced a gain of 2,400 jobs. **Administrative & Support Services** contributed to most of the job increases.

EDUCATION, HEALTH & SOCIAL SERVICES
+0 (+0.0%) OTM; +2,000 (+0.5%) OTY

383,000

The **Education, Health & Social Services** sector was unchanged since October when seasonally adjusted.

Over the year, a gain of 2,000 employees occurred in this industry. Education revealed a gain of 1,200 jobs while **Health Care & Social Services** added 800.

LEISURE & HOSPITALITY SERVICES**281,800****-500 (-0.2%) OTM; +1,300 (+0.5%) OTY**

Total employment of 281,800 for the **Leisure & Hospitality Services** sector represents a minor loss of 500 jobs for November when seasonally adjusted. Employment in this sector has remained relatively flat over the last 6 months.

Since last year 1,300 jobs have been added to the sector. A new casino opening with approximately 1,000 additional jobs along with gains in **Food Services & Drinking Places** helped boost over-the-year employment.

OTHER SERVICES**112,300****-300 (-0.3%) OTM; +1,300 (+1.2%) OTY**

Although the sector experienced a small monthly dip, **OTHER SERVICES** continues to exceed the number of jobs for the same period last year. **Repair & Maintenance** absorbed most of the job loss but exceeds the number of positions in previous years, returning to levels near 2002.

Other Services also experienced a slight decline nationally after three months of above-average gains.

GOVERNMENT**429,400****-500 (-0.1%) OTM; -100 (-0.0%) OTY**

Government employment inched downward over the month with the loss of 500 jobs. Both **State** and **Local Government** shared in the loss while **Federal Government** was little changed. Employment is unchanged when compared to one year ago as a loss of 500 in **State Government** was offset by an equivalent gain in **Local Government**. National **Government** job growth totaled 242,000 jobs (+1.1%) over the year.

Mass Layoff Statistics Graph

November, 2006

Employers with Mass Layoffs **

Initial Claims and Separations

November, 2005, to November, 2006 *

Initial claims for the covered period are:

2005-2006	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov
Initial Claims	27,084	49,009	46,263	25,440	21,593	25,571	24,158	24,573	43,768	21,395	23,450	27,095	29,977

The Mass Layoff Statistics Program is a State-Federal cooperative statistical program designed to identify, describe, and track large job cutbacks. The program relies on establishment and unemployment claims data from State Unemployment Insurance (UI) systems, as well as, information from employer interviews. Establishments that have 50 or more (20 or more for state events) initial UI claims filed against them within a five-week period are identified as having potential mass layoffs. Once identified, employers are interviewed by phone or sent a survey form to determine the size and duration of the layoffs. Mass layoffs are defined as separations lasting more than 30 days.

The following are the common causes for the difference between claims and separations:

Separations greater than Claims: No claim filed because of early retirement/separation packages, previously obtained employment, simultaneous employment, or individual left the workforce.

Claims greater than Separations: Larger number of people separated than initially determined by employer and/or people who will be recalled in less than 30 days included in claims. Also, discharges and voluntary quits are included in the claim count.

NOTE: November, 2005, claims include a significant number of routine large employer 1-2 week holiday plant shut-down claims.

* Preliminary numbers for November, 2006

** Seasonal layoffs not included

MSA Highlights

November, 2006

Over-the-Month Change

(Not Seasonally Adjusted)

Anderson	-600	The Manufacturing sector along with Leisure & Hospitality accounted for the over the month decreases.
Bloomington	+0	The few gains were offset by similar losses.
Columbus	+200	With Retail Trade seasonal build up and Manufacturing adding a minimal number of jobs the employment increase was slight.
Elkhart-Goshen	-200	Employment fell in this MSA due to the release of extra workers in the Motor Vehicle Body & Trailer Industry.
Evansville	-100	Small, offsetting movement among the sectors left employment unchanged.
Fort Wayne	+100	Improvement in Retail Trade counterbalanced the small losses in other areas.
Gary	+600	Gains in Retail Trade more the offset the losses in Leisure & Hospitality
Indianapolis-Carmel	+700	Gains in Retail Trade offset the decreases in Leisure & Hospitality
Kokomo	+100	No significant change
Lafayette	+300	Employing additional workers to augment regular employees in Retail Trade caused the boost.
Michigan City-LaPorte	+0	Area remains stable.
Muncie	+400	Retail Trade accounted for a majority of the increase due to hiring for the holiday season.
South Bend-Mishawaka	+300	Retail Trade hiring of seasonal workers gave a boost to employment in this MSA.
Terre Haute	+200	Only a small increase in employment was reflected due to seasonal jobs in the Retail industries.

About Metropolitan and Micropolitan Statistical Areas

The United States Office of Management and Budget (OMB) defines metropolitan and Micropolitan statistical areas according to published standards that are applied to Census Bureau data. The general concept of a metropolitan or micropolitan statistical area is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. Currently defined metropolitan and micropolitan statistical areas are based on application of 2000 standards (which appeared in the *Federal Register* on December 27, 2000) to 2000 decennial census data. Current metropolitan and micropolitan statistical area definitions were announced by OMB effective June 6, 2003.

Standard definitions of metropolitan areas were first issued in 1949 by the then Bureau of the Budget (predecessor of OMB), under the designation "standard metropolitan area" (SMA). The term was changed to "standard metropolitan statistical area" (SMSA) in 1959, and to "metropolitan statistical area" (MSA) in 1983. The term "metropolitan area" (MA) was adopted in 1990 and referred collectively to metropolitan statistical areas (MSAs), consolidated metropolitan statistical areas (CMSAs), and primary metropolitan statistical areas (PMSAs). The term "core based statistical area" (CBSA) became effective in 2000 and refers collectively to metropolitan and micropolitan statistical areas. OMB has been responsible for the official metropolitan areas since they were first defined, except for the period 1977 to 1981, when they were the responsibility of the Office of Federal Statistical Policy and Standards, Department of Commerce. The standards for defining metropolitan areas were modified in 1958, 1971, 1975, 1980, 1990, and 2000.

Defining Metropolitan and Micropolitan Statistical Areas

The 2000 standards provide that each CBSA must contain at least one urban area of 10,000 or more population. Each metropolitan statistical area must have at least one urbanized area of 50,000 or more inhabitants. Each micropolitan statistical area must have at least one urban cluster of at least 10,000 but less than 50,000 population.

Under the standards, the county (or counties) in which at least 50 percent of the population resides within urban areas of 10,000 or more population, or that contain at least 5,000 people residing within a single urban area of 10,000 or more population, is identified as a "central county" (counties). Additional "outlying counties" are included in the CBSA if they meet specified requirements of commuting to or from the central counties. Counties or equivalent entities form the geographic "building blocks" for metropolitan and micropolitan statistical areas throughout the United States and Puerto Rico.

If specified criteria are met, a metropolitan statistical area containing a single core with a population of 2.5 million or more may be subdivided to form smaller groupings of counties referred to as "metropolitan divisions."

As of June 6, 2000, there are 362 metropolitan statistical areas and 560 micropolitan statistical areas in the United States. In addition, there are 8 metropolitan statistical areas and 5 micropolitan statistical areas in Puerto Rico.

Principal Cities and Metropolitan and Micropolitan Statistical Area Titles

The largest city in each metropolitan or micropolitan statistical area is designated a "principal city." Additional cities qualify if specified requirements are met concerning population size and employment. The title of each metropolitan or micropolitan statistical area consists of the names of up to three of its principal cities and the name of each state into which the metropolitan or micropolitan statistical area extends. Titles of metropolitan divisions also typically are based on principal city names but in certain cases consist of county names.

Changes in Definitions over Time

Changes in the definitions of these statistical areas since the 1950 census have consisted chiefly of:

- the recognition of new areas as they reached the minimum required city or urbanized area population, and
- the addition of counties (or cities and towns in New England) to existing areas as new decennial census data showed them to qualify.

In some instances, formerly separate areas have been merged, components of an area have been transferred from one area to another, or components have been dropped from an area. The large majority of changes have taken place on the basis of decennial census data. However, Census Bureau data serve as the basis for intercensal updates in specified circumstances.

Because of these historical changes in geographic definitions, users must be cautious in comparing data for these statistical areas from different dates. For some purposes, comparisons of data for areas as defined at given dates may be appropriate; for other purposes, it may be preferable to maintain consistent area definitions. Historical metropolitan area definitions are available for 1999, 1993, 1990, 1983, 1981, 1973, 1970, 1963, 1960, and 1950.

Technical Notes, Appendix B

Employment estimates for nonagricultural industries are derived from a monthly survey of over 7,700 employing establishments and include full-time and part-time wage and salaried workers who worked or received pay for the pay period including the 12th of the month. Current month estimates may be revised slightly if additional data received in the following month warrants a change and may be revised when new benchmarks are constructed annually. Industry employment is coded under the 1987 STANDARD INDUSTRIAL CLASSIFICATION system. Due to rounding, the sum of individual industry items may not equal totals.

The statewide employment, hours, and earnings estimates contain data submitted by employers representing all 92 Indiana counties. Participating employers report "all employees", "nonsupervisory workers", and gross payroll and hours data for the pay period including the 12th of the reference month. "All employees" include salaried officials of corporations; executives and their staffs; persons on paid vacation, paid sick leave, other paid leave; part time employees and trainees. Excluded from "all employees" are proprietors, pensioners, unpaid family workers, partners of unincorporated firms, persons on strike the entire pay period, persons on unpaid leave the entire pay period, armed forces personnel on active duty the entire pay period, outside contractors to the reporting unit (and the contractor's employees), domestic workers, and persons employed on farms. "Nonsupervisory workers" include every employee except those whose major responsibility is to supervise, plan, or direct the work of others. Employment estimates are calculated from the "all employees" data submitted by employers. Hours and earnings estimates are calculated from payroll and hours worked data reported for "nonsupervisory workers."

Average earnings are gross and are affected by premium pay for overtime, incentive rates, shift differentials, and changes in basic hourly rates. Figures cover production workers in manufacturing and mining industries, nonsupervisory construction workers, and nonsupervisory employees in other industry divisions. Earnings averages include premium pay for overtime, holidays, and late shift work.

The statewide hours and earnings tables do not include a summary line for "*SERVICE PRODUCING*". The *SERVICE PRODUCING* line must be excluded because hours and earnings data are not available for: railroads; airlines; holding and investing offices; private schools; museums, art galleries, zoological and botanical gardens; federal, state and local government. Data for these industries are either not collected or we are unable to generate reliable estimates due to inadequate sample. Tables of average weekly earnings, average weekly hours and average hourly earnings for the local areas do not contain estimates for "*GOODS PRODUCING*". The *GOODS PRODUCING* line, at this level of detail, lacks data for mining and construction in each of the estimating areas.

The scope of the estimates for employment, hours, and earnings produced for the eleven statistical areas is the same as the statewide scope, except the estimates for each respective area contain data only for the counties in that area. For reference to the counties in each statistical area, please refer to the map.
